INDUSTRIAL ACCIDENT STATISTICS, QUEENSLAND, JUNE QUARTER 1969 AND
YEAR ENDED 30 JUNE 1969

Workers' compensation in Queensland is handled solely by the State Government Insurance Office. All employers must insure their employees, but self-employed persons are not obliged to insure, and members of the Police Force and the Commonwealth Public Service are excluded. Details of industrial accidents given in this bulletin were extracted from claims finalised or becoming three years old during the periods covered. They do not refer to accidents actually occurring within these periods. By definition, accidents which caused employees to lose less than a full shift from work are excluded from the statistics.

Tables 1 to 4 comprise standard analyses of work injuries relating to the June quarter, while Tables 6 to 9 relate to the whole year 1968-69. Table 5 sets out quarterly statistics for the fifteen months ended 30 June 1969, but, as explained in the first paragraph above, these statistics are not measures of seasonal fluctuations in occurrences.

For the year ended 30 June 1969, out of 38,255 work injuries, 35,148, or 91.9 per cent, were to males, and 3,107, or 8.1 per cent, to females. A total of 37,318, or 97.5 per cent of all injuries, were of a temporary nature, 867, or 2.3 per cent, resulted in permanent disabilities, and 70, or 0.2 per cent, were fatal (all males).

In the year 1968-69, 642,068 calendar days were lost by males through temporary disabilities and 59,328 by females. Male employees lost an average of 18.8 days through temporary disabilities, but 40.3 per cent of absences did not exceed one week's duration. The average number of days lost by female employees through temporary disabilities was 19.3. However, 38.9 per cent of their absences did not exceed one week's duration.

Of the male occupation groups listed in Table 7, metal tradesmen and process workers suffered most injuries (7,885, or 22.4 per cent). In the female grouping, more accidents (911, or 29.3 per cent of the total) happened to service industry and recreation workers than to any other group.

For both sexes combined, the most common agents precipitating accidents were hand tools and movable equipment, which resulted in 8,305, or 21.7 per cent, of work injuries (Table 8). The most common type of accident was struck by moving or falling objects. This accounted for 16,300, or 46.4 per cent, of male injuries and 1,153, or 37.1 per cent, of female injuries (Table 7).

Of total injuries to both males and females combined, the two most common injury types were lacerations and open wounds (10,993 cases, or 28.7 per cent) and sprains and strains (10,311 cases, or 27.0 per cent). Fractures and dislocations caused 30 of the total of 70 fatalities.

More detailed statistics are available quarterly and annually and may be had on request.
